

Honeycomb Polypropylene Cases

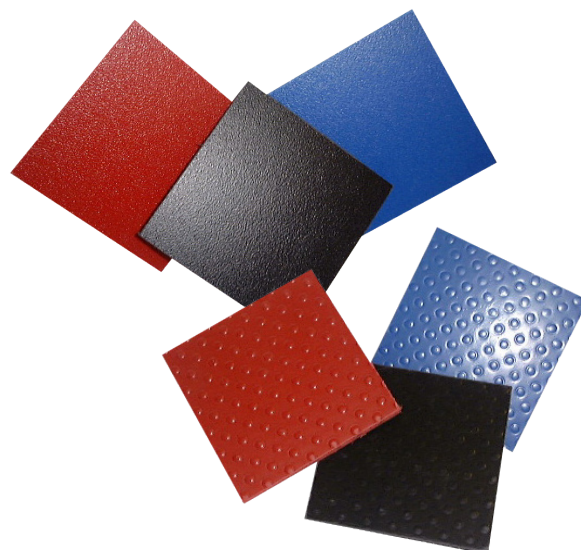

HPP Cases

CP Cases continually searches for innovative materials and processes to enable us to offer our customers as many opportunities as possible to solve their transit packaging problems.

CP now offers an alternative to conventional materials for flight cases where both weight and strength are considerations.

Honeycomb polypropylene (HPP)

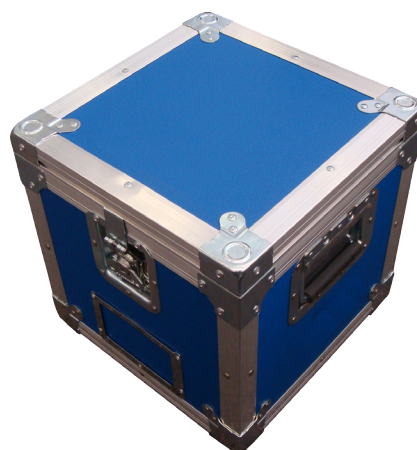

- Weighs 40% less than its equivalent in wood
- Polypropylene “honeycomb” sandwich construction for added strength
- Suitable for cases with lightweight applications
- Available in 6mm and 9mm
- Available in blue, black and red

Manufactured using CP Cases’ established construction methods, cases made with HPP offer exceptional strength with an often vital weight advantage.

HPP can be used to create ultra lightweight 19” electronic racks such as our innovative SatRack weighing just 9kg for a 4U rack.

HPP is particularly suited to lightweight applications in electronics, test & measurement, and medical industries.
